

COLOR MATCH WAIVER AGREEMENT

NOTE: The "Color Match Wavier Agreement" must be returned, with samples, to Millwork Concepts prior to any orders being placed.

All wood is natural. Therefore, there will be variances in color and wood grain. Most exotic woods are photosensitive and will undergo dramatic changes of color depending on exposure to indoor UV light or sunlight. These characteristics create a range of colors in every plank and can therefore affect the color match of the finished transitions. Consequently, to insure the best match across this spectrum of variables, Millwork Concepts requires a minimum of 4 different planks, no less than 24 inches long or a full sized (min. 18"x18") sample panel showing the range of hue, tone and color expected in each species. If less than that amount is sent, Millwork Concepts will be unable to attempt a suitable color match.

Millwork Concepts will retain all samples provided for future reference. In addition, manufactures production dye lots can change over time. Therefore, it is necessary for customers to provide Millwork Concepts updated samples to assure a continuous color match with the manufacturer's changing production.
